

# WEBINAR

THE LOCAL FARM XCHANGE (TLFX) 2021

## The Future of Fish - is there one?

Date: 14 October 2021, Thursday  
Time: 2pm - 4pm

Singapore is a Food Paradise so we will never go hungry, right? Think again.

We import about 90% of our food and this dependence on other countries is vulnerable, especially during the current global economy impacted by the Covid-19 pandemic where food supply chains are disrupted.

Join us for an engaging, thought-provoking webinar with our esteemed panel of speakers as we unpack the myths and misconceptions of Singapore's aquaculture farming community and dive into conversations about the future of fish.

*Have you ever considered the future challenges of sea farming?*

*Do you think technology is the key to solve food problems?*

*Will seafood still exist in the next century?*

In conjunction with **World Food Day 2021**, the inaugural TLFX event will focus on Singapore's aquaculture farming community.

### Why is this exchange critical?

In order to achieve Singapore's **30 by 30** goal, we need to be united in our approach and efforts to:

- a) increase local farms to produce 30% of Singapore's nutritional needs
- b) support our local produce by buying from our own aquaculture farmers
- c) encourage aquaculture farmers to improve productivity by harnessing technology

The time is now to rethink, rework and rebuild a new future for Singapore where food security and sustainability take centre stage, to cultivate new perspectives for our current and future generations. Why? Because, **"no farmers, no food"**.

**Sign up** for the [webinar](#) today and take your first step in making an impact on Singapore's aquaculture farming ecosystem.
