A Herbal Remedy Against Dengue

- Currently, there are no specific treatments available for the DENV infection, or its more serious forms including dengue haemorrhagic fever, plasma leakage, and dengue shock syndrome. Although a chemical drug is currently undergoing human clinical trials, there are also no complementary health products that can treat this strain of viruses.
- TP has developed a herbal remedy where a concoction of herbs has shown to be effective in reducing dengue 1 and 2 virus infection, based on in-vitro testing.
- This innovative formulation is based on TCM theory and two anti-viral mechanisms that prevent the virus from entering into the host cell and replicating.
- The project also won a Gold Award in the 2nd National Health and Wellness Industry Youth Innovation Competition, held in China
