

Project Engineer (Singapore)

We are looking for a proactive and motivated Site Project Engineer to join our team immediately. You will take charge of projects, coordinating with clients, consultants, contractors, and project teams to ensure projects are delivered safely, on time, and according to design specifications. This role combines on-site execution, quality control, technical support, and team leadership, offering exposure to planning, documentation, and plant testing. Both fresh graduates and experienced candidates are welcome to apply, immediate joiners will be given priority!

Job Description:

- To handle water/wastewater projects independently in terms of budget, planning, schedule, and deliverables
- To coordinate with clients, consultant, main contractor, project team, sub-contractors to ensure project implementation smoothly.
- To work closely with Project Manager, BIM Designer for drawing review, update, and timely submission for approval.
- To prepare method statements, risk assessment, progress report and technical submissions
- To manage site activities to ensure the project progress on track
- To make sure the quality of work can meet the project requirements
- To ensure the compliance of EH&S policies, applicable rules, procedures, and regulations at project site
- To involve in the plant testing and commission at site.
- To manage engineering and project document systematically.
- To certify jobs completed and prepare progress claims.
- To provide technical support for tender preparation.
- To lead the team to carry out the works in compliance with safety regulations and strive for zero accident in the workplace.
- Other ad-hoc assignments.

Requirements:

- Recognized Diploma/Degree in Mechanical or Civil Engineering
- Proficient with AutoCAD
