- 272 Game Design & Development
- 276 Information Technology
- 280 Mobile & Network Services
- 284 Subject Synopses

Walk into any bank, airport, school, office, hospital, park, theatre, train station and you will notice the pervasive power and influence of Information Technology. At the School of Informatics & IT, you will receive a strong foundation in IT and an understanding of specialised areas like big data, analytics, financial services, forensics, cyber security, game development and more.

As a leader in the field of IT education, we are recognised as a forward-looking and progressive School, providing the widest range of highly relevant courses. Our emphasis on developing problem-solving and thinking skills helps us to cultivate intelligent individuals who are independent, analytical and able to respond effectively to the needs of people and organisations. We have a strong culture of research, innovation and enterprise to nurture professionals who are ready for the industry. Communication skills and teamwork are also emphasised because these are key attributes for people working in a global economy.

Through our Student Internship Programme, you will have the chance to gain real life work experience in either local or overseas companies, organisations or research institutes. In fact, in your final year you can be attached to an organisation for up to one year as an intern, grooming and preparing you for the challenges of the workplace and giving you an edge when you seek employment.

Develop your talents and skills by taking part in enrichment programmes which include national and international competitions. You will also have the opportunity to complete professional IT certification exams. Participation in local and global community projects is something we strongly encourage. There are many opportunities for you to be involved in social outreach projects to make a difference in the lives of others. After three years, you will graduate with the confidence, qualities and skills to add value to the organisations you join.

To ensure that our curriculum remains relevant to the industry, we work closely with employers to maintain quality, industry relevance and high academic standards. An advisory committee, comprising leading industry professionals from a range of companies such as Autodesk, Cisco Systems, EMC, Fujitsu, the Infocomm Media Development Authority of Singapore, IBM, Microsoft, SAS, ST Electronics and more, provide advice to the School on its strategic direction and development to ensure that the courses we offer prepare you well for the future.

Specialist Centres and Learning Enterprises

Agile IT Solutions Centre

This Centre is a Learning Enterprise where staff, students and industry engage in providing solutions to real-life business and organisational challenges by developing solutions using Agile methodologies and design thinking. The use of Agile methodologies help improve productivity in developing IT solutions, demonstrating in the process a keen sensitivity and responsiveness to user needs.

Innovation & Research Centre

This Centre is a Learning Enterprise for staff, students and industry to work together on translational research and innovation projects. It will host and enable participants to pursue applied industry research and participate in programmes that will help commercialise their innovations. The Centre's goal is to support participation in Research, Innovation and Enterprise (RIE) projects to nurture innovative scientists, IT engineers and competent IT professionals through funded projects.

Temasek Advanced Learning, Nurturing and Testing Laboratory (TALENT Lab)

With the purpose of grooming the next generation of cyber security professionals, the Ministry of Home Affairs and Temasek Polytechnic have jointly collaborated to set up the Temasek Advanced Learning, Nurturing and Testing Laboratory (TALENT Lab). The TALENT Lab will foster deeper cooperation

between MHA and the Institutes of Higher Learning (IHLs) in the areas of cyber-forensics and cyber-investigations. The TALENT Lab provides a conducive and realistic environment for students to practice their 'defend and protect' skillsets through near real-life cyber security scenario simulations. They will also learn how to design and validate their innovations in dealing with the latest cyber-threats. This practical approach will prepare students well for future careers in cyber security.

TP-Autodesk Serious Games Hub

- **Select-Start Studios**

These Studios provide an environment, which supports the development of digital games for education, business, human resource training, entertainment and a host of other purposes. It provides students with a real world learning environment and experience at each crucial stage of the game development process. Within the Studios, students will have spaces for game design and game development.

- **Ui/Ux Future Lab**

Students at the Ui (user interface) and Ux (user experience) labs will learn about human computer interaction and engage in testing out their applications. Beyond evaluating current user interfaces and user experiences the Ui/Ux Future Lab is also equipped to work on new forms of interactions for future devices and applications. The labs have the latest equipment

such as a state-of-the-art eye tracker system for evaluations. The results of the evaluations help students refine their interface and improve the overall user experience.

- **Game Certification Centre**

At the Game Certification Centre, we validate the skills and professional development for the game industry. This gamification centre provides certification for game technologies related to the industry. Such technologies include the latest game engines and industry recognised certifications, such as the Autodesk Professional certifications. We are currently the only polytechnic, which provides Autodesk Professional certifications for the media and entertainment industry.

TP Green Data Centre

Designed for maximum energy efficiency and minimum environmental impact, the Green Data Centre enables IT applications and services, as well as computing resources to be centrally stored, managed and disseminated, without compromising energy consumption. The first Cisco Unified Computing System (UCS) deployed in South East Asia, it also hosts virtual desktop infrastructure technologies from partners such as VMware, EMC, Cisco and Fujitsu.

TP-Cisco Internet of Everything (IoE) Centre

The Internet of Everything (IoE) Centre at the School of Informatics & IT is a collaboration with Cisco which enables government agencies to funnel industry specific IoE solutions development and other related activities to it. Cisco helps to develop TP staff and students' technical capabilities in the area of IoE from embedded device level, design interface level, and networking level to the application level.

TP-IBM IT Service Management Centre

Established in collaboration with IBM Singapore, this Centre functions as a real-time learning enterprise that provides students with a holistic environment in which theory is put into practice as they focus on managing IT Systems, providing IT solutions to clients, monitoring service performance levels and adopting best practices that meet industry standards. The Centre is based on the IBM IT Services Framework which includes IBM's portfolio of products and practices to provide an integrated hands-on training on IT service management.

TP-IBM Retail Analytics Centre

Established in collaboration with IBM Singapore, this Centre exposes staff and students to IBM's business analytics technologies and methods used in a live production environment. IBM annually engages their retail clients to work with the School's staff and students at the Centre to carry out proof-of-concept and client projects in the area of retail analytics.

TP-IBM Security Operations Centre

The Security Operations Centre provides knowledge and skills training to staff and students in IBM's cyber security operation and incident management processes, methods and cyber security technologies. Staff and students get opportunities to work alongside IBM security professionals on security projects as well as leverage IBM's Global Academic Initiative to support TP's IT security related subjects. Students who are attached to this on-campus centre will gain unique hands-on experience in all aspects of cyber security monitoring and analysis, under the supervision of TP staff as well as IBM consultants and experts.

TP-Nvidia Technology Centre

The TP-Nvidia Technology Centre (NTC) facilitates engagement on industry projects using Deep/Machine Learning and AI technologies, and Nvidia's GPU (Graphic Computing Processes) platform. This is the only centre that Nvidia has set up at a polytechnic in Singapore.

TP-Pivotal Data Science Academy

At this academy located in the School of Informatics & IT, full-time students taking the Big Data Management & Governance and Business Intelligence & Analytics diploma courses will take modules that support their coursework and lead to professional certifications. The academy also provides short elective courses and a six-week projects programme designed to solve hypothetical problems as well as real problems in the areas of Data Science and Engineering. Students taking part-time courses would also benefit from modules offered by this academy.

TP-RSA Security Operations Centre

This Centre provides an environment equipped with the most advanced IT security and analysis technologies including RSA Security Analytics, SecOps and ECAT. RSA will impart knowledge and best practices on developing and managing an intelligence driven SOC operations to staff and students.

TP-SAS Business Intelligence & Analytics Centre

Established in collaboration with SAS Institute, this Centre provides the latest infrastructure, facilities, software, and datasets to facilitate learning of comprehensive business intelligence and analytics skill sets in a data-rich environment. This Centre is capable of supporting the end-to-end business analytics life cycle, and focuses on areas such as business intelligence, data mining, social media analytics and predictive analytics. It also promotes industry collaboration and capability building by enabling students and staff to undertake relevant industry projects, and conduct applied research and development in advanced analytics.

TP-Thomson Reuters Financial Risk Management Centre

Established in collaboration with Thomson Reuters and equipped with its financial software, and premium financial information terminals, this Centre provides students with the unique opportunity to learn in a live financial market environment that familiarises them with investment banking and risk management operations.

Big Data Management & Governance

Do you know that big data plays a major role in our lives? For instance, big data assists soccer clubs in how they use data to gain a strategic competitive advantage in soccer. Digital cameras placed in stadiums track every player on the pitch for game insights, while soccer players wear state-of-the-art equipment like GPS trackers, acceleration sensors and heart rate monitors so that their game preparation can be analysed and optimised.

Big data also extends itself to everyday activities such as online shopping. Websites are leveraging big data to provide a better shopping experience for their customers. For instance, online shopping giants like Amazon use big data to cut delivery times by predicting what online shoppers are going to buy and start delivering the product even before the customer clicks 'buy'!

Indeed, with big data gaining popularity in today's landscape, it is an exciting time for big data professionals. Recognising this, the Singapore Government has come up with initiatives to create a vibrant Data and Analytics ecosystem and position the country strategically as an international Data and Analytics Hub. The first and only polytechnic to offer a full-time Big Data

course, you will have opportunities to work with data at your fingertips. You will also attain highly sought-after professional certifications in Data Engineering, which ascertains your technical competency that you've built through the curriculum. When you graduate, your skillsets will be in great demand by organisations. There are many opportunities and great potential for you to excel in this area. In addition, you can pursue further studies at local or overseas universities, leveraging on the advanced standing arrangements that we have.

There is a clear demand for graduates who have skills and knowledge in the area of Big Data Management & Governance. Your graduates will fill a known need in the big data value chain with the skills they acquired from this course.

Mr Eric Goh
Managing Director
EMC Computer Systems
(South Asia) Pte Ltd

Career Opportunities

Graduates can expect good career prospects across many industries with local and multinational businesses, government agencies, financial and banking institutions and consulting firms as Data Engineers, Data Specialists, Big Data Operations Specialists, Big Data Technical Support Specialists, Big Data Extract Transform Load (ETL) Developers, Data Virtualisation Specialists, Data Administrators and Data Warehousing Specialists.

Graduation Requirements

Cumulative Grade Point Average	: min 1.0
TP Core Subjects	: 23 credit units
Diploma Subjects	
Core Subjects	: 86 credit units
Elective Subjects	: min 8 credit units
Cross-Disciplinary Subjects	: min 9 credit units
Total Credit Units Completed	: min 126 credit units

Application

Apply during the Joint Admissions Exercise following the release of the GCE O Level results. For other categories of local applicants, please refer to the section on “Admission and Requirements”. For international students, please refer to the section on “Information for International Students”.

Minimum Entry Requirements

English Language (EL1) *	Grades 1 - 7
Mathematics (E or A)	Grades 1 - 6
Any three other subjects, excluding CCA	Grades 1 - 6

To be eligible for selection, applicants must also have sat for one of the following subjects: Additional Combined Science, Additional Science, Biology, Biotechnology, Chemistry, Combined Science, Computer Studies, Creative 3-D Animation, Design & Technology, Engineering Science, Food & Nutrition, Fundamentals of Electronics, General Science, Human & Social Biology, Integrated Science, Physics, Physical Science, Science (Chemistry, Biology), Science (Physics, Biology), Science (Physics, Chemistry), Science (Physics, Chemistry, Biology).

** Sijil Pelajaran Malaysia (SPM)/ Unified Examination Chinese (UEC) holders must have a minimum of grade 6 for the relevant English Language subject (e.g. Bahasa Inggeris).*

Note: Applicants with complete colour vision deficiency are not eligible to apply for this course.

CROSS-DISCIPLINARY SUBJECTS

Students are required to obtain a minimum of 9 credit units from the list of Cross-Disciplinary Subjects.

Business Intelligence & Analytics

To run a successful business, you must understand customer needs, preferences and purchasing trends. You need to know what's available in the market, what's selling well, and what your competitors are up to. Yes, that's right – you need to gather intelligence and analyse it to propose smart business strategies. In essence, you will be the thinker behind successful businesses.

Analytics professionals have an exciting career in store, for the Singapore Government is positioning the country strategically as an international Data and Analytics Hub as well as a Smart Nation. If you like Mathematics and Statistics, have a knack for spotting trends among seemingly unrelated facts, and want to help businesses do better and compete more effectively, then take up this course which will position you for an exciting and rewarding career.

You will undertake projects that equip you with working experience and business domain knowledge that you require as a professional in this field. Exciting internship opportunities with local or overseas organisations provide you with valuable skills and experience as you will be working with diverse people in a dynamic work environment. You can achieve highly

sought-after professional certifications, such as SAS Certified Base Programmer and SAS Certified Predictive Modeler Using SAS Enterprise Miner, to ascertain technical competency built through the curriculum. You can also further your studies at local or overseas universities, leveraging the advanced standing arrangements that we have.

We strongly support Temasek Polytechnic's BIA course which aims to prepare more graduates in this area to meet global demands; which would also support Singapore's position as a business analytics competency centre for Asia.

Mr Francis Fong
Managing Director
SAS Institute Pte Ltd

Career Opportunities

Graduates can expect good career prospects across many industries such as local and multinational businesses, government agencies, financial and banking institutions and consulting firms as Data Analysts, Business Intelligence Analysts, Business Analytics Specialists, Business Analytics Technology Consultants, Customer Relational Management (CRM) Analysts, Data Mining Specialists, Data Warehousing Specialists, Web & Social Media Analysts and Research Analysts.

CROSS-DISCIPLINARY SUBJECTS

Students are required to obtain a minimum of 9 credit units from the list of Cross-Disciplinary Subjects.

Cyber & Digital Security

Viruses, trojans and hackers – these are some of the dangers lurking on the Internet, crippling government and business operations and leading to financial losses. Developing counter measures against them requires creative problem solving skills and talent. Highly skilled information security professionals with strong technical foundation and creativity are vital in battling such cyber threats. If you aspire to be in this highly regarded profession, then join this exciting course.

In the first year, you will acquire knowledge to build a strong IT foundation. In your second year, you will master competencies in security ranging from network, system and application to cloud security and mobile security. Receiving hands-on training in state-of-the art facilities, you will learn how to conduct vulnerability assessments of computer and application systems, use ethical hacking tools and implement intrusion prevention solutions.

In your final year you will have experience working in the TP-IBM Security Operations Centre and TP-RSA Security Operations Centre, which we have set up with our industry partners. In addition, you will have opportunities to be attached to

local and overseas IT security companies where you can apply your knowledge and skills to information security projects and real-life situations. Our students have been attached to organisations like EMC, IBM, Interpol, RedHat, PriceWaterhouseCoopers and OCBC Bank.

You will attain industry sought-after professional certifications, such as the Cisco Certified Network Associate (CCNA) and RedHat Certified System Administrator/Engineer (RHCSA/RHCE). Our graduates pursue degrees in local and overseas universities after completing this course, leveraging advanced standing arrangements that we have with these institutions.

Cyber security threats are a global priority. To respond to these threats, we must address the shortage of skilled cyber security professionals. We applaud TP's course in Cyber & Digital Security, which is designed to develop the next generation of professionals, who not only possess knowledge, but also practical skills. Students learn and apply their know-how in a real environment to proactively detect, respond and develop counter measures to these threats. Such skills are very much in demand.

Vincent Goh
Vice President, Asia Pacific & Japan
CyberArk Software (Singapore) Pte Ltd

Career Opportunities

You can expect good employment opportunities with local and multinational businesses, governments, financial and banking institutions, and consulting firms as IT security specialists/ auditors, network and systems specialists, as well as IT security product developers and solutions providers.

Digital Forensics

Digital forensics involves the analysis of evidence from any digital sources that can be used to prosecute criminals who have committed offences such as stealing information, and hacking into computers and network systems. The increase in cybercrimes has led to a huge demand for digital forensics specialists who can assist in criminal investigations and homeland security. If you have an analytical and inquisitive mind, join us to become a computer forensics investigator. You will learn to seize, secure, examine and reconstruct digital evidence to unravel the mystery behind a computer-related crime or cyber security incident one byte at a time.

The first polytechnic to launch a digital forensics course, we have established industry links and built a strong capability in the area of digital forensics. You will be equipped with a broad knowledge of IT, psychology and criminal law, and in-depth knowledge of digital forensic techniques in retrieving digital evidence from computers and networks. In the first year, you will master IT fundamentals and build strong foundations in computer science.

In your second year, you will learn to collect, preserve and analyse different file systems, media, applications and networks for digital

evidence. In addition, you will learn the legal aspects of presenting digital evidence for a court-of-law and acquire basic knowledge of psychology to understand the motivation behind criminal activities.

In your final year, you will have the experience of working in a Security Operations Centre which we have set up with our industry partners, IBM and EMC, where you will apply your investigative skills in the management of cyber-security incidence. In addition, you may also be attached to organisations such as Interpol, Singapore Police Force and KPMG for internships that allow you to integrate and use knowledge in real-life situations.

You will have the opportunity to attain professional certifications in networking, open source and digital forensics. Our graduates can look forward to furthering their studies by choosing from a range of courses at local or overseas universities, leveraging on the advanced standing arrangements that we have.

The increasing complexity of cyber crimes coupled with the fast evolving digital landscape that we operate in today, presents a challenging and dynamic environment for the Police to operate in. It is thus reassuring that TP is developing a pool of skilled digital forensic professionals whom the Police can tap in our fight against cybercrime.

Technology Crime Division
Criminal Investigation Department
Singapore Police Force

Career Opportunities

You can expect to work in financial institutions, government/ law enforcement agencies and consulting firms in positions such as digital forensic analysts/ researchers and IT security analysts/ auditors.

CROSS-DISCIPLINARY SUBJECTS

Students are required to obtain a minimum of 9 credit units from the list of Cross-Disciplinary Subjects.

Financial Business Informatics

In the local and global banking and financial services industry, there is demand for professionals who possess information technology skills and a sound understanding of financial business processes. Such techno-strategists, with their dual skills, are sought after because they can contribute significantly to the organisations they join.

This course equips you with the knowledge and skills to be technically and financially savvy. You will learn how banks and financial institutions are structured to operate in the global financial markets. Your knowledge of IT and financial services will give you a distinct advantage in seeking employment in financial organisations or when you create a financial technology (FinTech) startup venture.

In your final year, you will get hands-on experience through attachments to banks and financial institutions. This will also provide you with the opportunity to use the knowledge you have acquired in your first two years and pick up important people skills so that you develop sensitivity to the needs of clients and organisations.

Upon completing the course, many of our students move on to undertake degree programmes in local or overseas

universities, leveraging the advanced standing arrangements we have with them. In addition, many of our top alumni secured scholarships for university studies.

With dual skills in IT banking processes and a keen knowledge of key financial systems, students from this course will be able to support investment operations as well as contribute as business analysts skilled in the banking domain. The training these students receive in Thomson Reuters products, enables them to help customers become more efficient and equips them to lead in the evolution of the global financial market.

Mr Alfred Lee
Managing Director
ASEAN
Thomson Reuters

Career Opportunities

With unique dual skills in finance and IT, you are well-positioned for careers in financial institutions, and business/IT consulting firms. You can look forward to jobs as financial systems consultants, IT/business analysts or financial products settlements specialists. You could also look forward to joining the exciting financial technology (fintech) industry or developing your own start-up company.

Graduation Requirements

Cumulative Grade Point Average	: min 1.0
TP Core Subjects	: 23 credit units
Diploma Subjects	
Core Subjects	: 86 credit units
Elective Subjects	: min 8 credit units
Cross-Disciplinary Subjects	: min 9 credit units
Total Credit Units Completed	: min 126 credit units

Application

Apply during the Joint Admissions Exercise following the release of the GCE O Level results. For other categories of local applicants, please refer to the section on “Admission and Requirements”. For international students, please refer to the section on “Information for International Students”.

Minimum Entry Requirements

English Language (EL1) *	Grades 1 - 7
Mathematics (E or A)	Grades 1 - 6
Any two other subjects, excluding CCA	Grades 1 - 6

To be eligible for selection, applicants must also have sat for one of the following subjects: Additional Combined Science, Additional Science, Biology, Biotechnology, Chemistry, Combined Science, Computer Studies, Creative 3-D Animation, Design & Technology, Engineering Science, Food & Nutrition, Fundamentals of Electronics, General Science, Human & Social Biology, Integrated Science, Physics, Physical Science, Science (Chemistry, Biology), Science (Physics, Biology), Science (Physics, Chemistry), Science (Physics, Chemistry, Biology).

** Sijil Pelajaran Malaysia (SPM)/ Unified Examination Chinese (UEC) holders must have a minimum of grade 6 for the relevant English Language subject (e.g. Bahasa Inggeris).*

Note: Applicants with complete colour vision deficiency are not eligible to apply for this course.

CROSS-DISCIPLINARY SUBJECTS

Students are required to obtain a minimum of 9 credit units from the list of Cross-Disciplinary Subjects.

Game Design & Development

This is a thrilling time for the video games industry with Singapore growing in status as a hub for the most exciting game companies. Video game companies which have produced many of the world's best games have set up offices here alongside renowned video game publishers and development studios. Together, they complement Singapore's strategy to be a leader in the Interactive Digital Media landscape.

Any person can play a video game; but to successfully develop a game that excites, engages, and educates an audience requires skill. These include skills in concepts – such as digital storyboarding, production – including 2D/3D animation, and publication – involving the business of video games.

We prepare you to be industry relevant with certifications from our industry partners such as Autodesk and Unity.

Our subjects allow you to have a strong understanding of and experience in the various aspects of the game production pipeline, giving you a firm grasp of the end-to-end process in developing a successful game.

Our lecturers, several of whom have worked on some of the world's best-selling video game titles, specialise in various areas of game production. They will help you acquire the skills to create your games from the initial stages of concept development and design, through to programming and the final stages of publishing a game.

To give you a head start in the industry, you will work in the Select-Start Studios taking on real world projects. Some of our students' projects include commercially available iPhone and Android games, as well as games for local companies and organisations. You will also have the chance to be attached to leading game developers, overseas companies and universities for your internship.

Upon your graduation, you can further your studies at local and overseas universities which we have good advanced standing arrangements with.

Singaporean companies have produced several international award winning games in recent years, fuelling the growth of the industry as a whole. This creates new employment opportunities for Singaporeans with the right skills and Personae Studios is proud to work with students from TP's Game Design & Development course in bringing us to the new digital future.

Edmund Koh
Director
Personae Studios
Treasurer, Games Exchange Alliance

Career Opportunities

You will graduate with the skills to fill the following types of positions: game designers, graphics software developers, game content developers, game programmers and mobile game developers.

Information Technology

Are you interested in creating IT solutions for the world around you? Are you interested in joining a vibrant industry that is at the forefront of innovation? Are you interested in a diploma that gives you a general array of IT skills while offering the distinct advantage of branching out later into different areas?

Graduates from this course are able to use IT to transform the culture and environment of any business organisation, bank, hotel, airport, and hospital. They would be frontline innovators helping to bring software solutions to people and businesses through the use of technologies. If you enjoy solving problems and are passionate about developing solutions through IT, then consider this course in Information Technology.

You have two clusters of elective subjects to choose in this course:

- **Business Analytics Cluster:** focuses on analysing and interpreting data and converting them into useful insights for developing strategies for the organisation;
- **Game Development Cluster:** focuses on teaching you the knowledge and skills needed to design and develop games.

In your final year, you will integrate the knowledge that you have acquired to

complete a major project. You will also be attached to either a local or overseas company as an intern.

This course has an established track record of producing highly successful students who have won top positions in national and international IT software applications and development competitions. Many of our graduates have also gone on to pursue both undergraduate and postgraduate degrees in local and overseas universities, with a significant number receiving attractive scholarships to further their studies.

More than 3 billion people with devices will be leveraging cloud services that cut across work and life. Computational thinking is a fundamental skillset for problem solving and for driving innovative products and services. Students from this course will be well-placed to lead future industry trends, and groomed to solve real world problems. This course provides a strong foundation for nurturing outstanding IT professionals who will benefit the industry when they graduate.

Ms Jessica Tan
Managing Director
Microsoft Singapore Pte Ltd

Career Opportunities

With a broad-based education in IT, your employment prospects are excellent. You will be able to fill positions as IT business analysts, application developers and systems analysts in government organisations, software houses, large multinational corporations, financial institutions.

Graduation Requirements

Mobile & Network Services

This course grooms you to become an expert in creating, delivering and managing Internet of Things (IoT) solutions or services. You will learn to develop Internet of Things (IoT) solutions and how to deliver these IoT solutions through various network technologies. Imagine a world where billions of objects can sense, communicate and share information over the Internet. These interconnected objects have data regularly collected, analysed and used to help streamline business processes and provide innovative new services to increase productivity and save costs. You will also be trained in the best practices and use state-of-the-art tools from IT Service Management (ITSM) industry giants in our TP-IBM IT Service Management Centre, which is the first 'live' centre in an institution in Asia to offer real-life ITSM practice.

You will be trained in the area of Internet of Things (IoT) and IT Service Management. You will acquire specific skills to create, deliver and innovative IoT solutions or services for organisations that can enhance the lives of people and business processes.

You will have a chance to work with companies such as Cisco Systems and IBM on projects. Our Student Internship

Programme also allows you to gain valuable experience and exposure which prepares you as a professional. To provide you an edge when you graduate, the course also prepares you for professional certifications such as the Cisco Certified Network Associate (CCNA) and IT Infrastructure Library (ITIL), awarded by Cisco Systems and IBM respectively.

Our advanced standing arrangements with local and overseas universities also enable you to move on from a diploma to a degree easily to further your studies.

The Internet of Things allow billions of devices, sensors, cloud infrastructure and business intelligence tools to come together to enable people to make informed decisions. This helps businesses to drive more innovation and services. Cisco predicts that it will create a massive opportunity worth \$14.4 trillion over the next decade. Graduates from this course would be in high demand as they would have acquired the right skills to develop smart applications and services to respond to industry's needs.

Mr Irving Tan
President Asia Pacific & Japan
Cisco Systems (USA) Pte Ltd

Career Opportunities

Upon successful completion of the course, you can enter a variety of challenging and rewarding careers as network administrators/ engineers, computer systems and server administrators, wireless systems specialists, IoT developers, IoT systems specialists and ITSM technical specialists.

CROSS-DISCIPLINARY SUBJECTS

Students are required to obtain a minimum of 9 credit units from the list of Cross-Disciplinary Subjects.

Subject Synopses

BAF1007 Basic Business Finance

This subject provides a general overview of the balance sheet and profit and loss statement of the company. It also provides a basic understanding of the sources and allocation of funds within a business enterprise, and an appreciation of some of the financial tools and techniques used by the financial manager in the management of funds and other financial resources.

BAF1009 Fundamentals of Accounting

This subject covers double-entry bookkeeping, profit determination and contents of financial reports for sole proprietorship businesses. You will have opportunities through various learning methods to apply the knowledge to real world situations.

BAF2006 Fundamentals of Investment

This subject provides a framework for understanding and analysing securities, and covers the key institutional features and theories of investment. Topics covered include the investment environment, return and risk in an investment setting, common stocks, fixed income securities and alternative investments.

BLM2008 Criminal Procedure for Forensic Analysts

This subject provides digital forensic professionals with an understanding of the criminal procedure and rules of evidence in Singapore necessary for the work of digital forensic analysts.

BRM1005 Marketing Fundamentals

This subject provides you with an understanding of the basic concepts and practices of modern marketing. It focuses on the role and the tools utilised by marketers in developing the appropriate marketing mix for target segments.

CCD1C02 Enterprise Networking

This subject covers the enterprise wired and wireless networking concepts. Basic theories of routing and switching, wireless technologies and their applications in an enterprise network environment will also be covered.

CCD1C04 IT Law & Ethics

This subject introduces students to the issues related to IT law and ethics. Topics covered include the computer misuse act, personal data privacy act and intellectual property rights.

CCD1C05 IT Security Essentials

This subject aims to provide the students with a foundational understanding of what is cyber security, common threats and an appreciation of the controls that can be used to mitigate cyber-attacks. It introduces key elements of information security based on confidentiality, integrity and availability and how they are applied in various security scenarios. Students can proceed to develop deeper skills of implementing security controls in their respective domains. The subject covers technical controls at basic levels with hands-on practical classes to illustrate concepts. The subject also covers a broad range of concepts such as security policies, procedures and processes to protect IT systems against cyber-attacks and information breaches.

CCD2C01 Internetworking Security

This subject introduces you to internetworking security technologies, including Wide Area Network (WAN) and remote access, and the security techniques from host to Internet security. You will learn how to secure both wired and wireless access over an internetwork.

CCD2C03 Ethical Hacking & Intrusion Prevention

This subject discusses threats on the Internet and provides an understanding of how a cyber-attacker will penetrate a network. It equips you with the principles and practices of preventing such attacks, discussing threats such as malicious codes, website defacing and hacking, illegal access to unauthorised information, privacy violations, distributed denial of services and cyber terrorism. You will acquire knowledge of potential threats, various penetration strategies and methods, and the respective counter measures. You will also learn the principles of creating a secure network design.

CCD2C04 Forensics in Digital Security

This subject covers the concept and techniques required to discover and investigate evidence from various digital storage devices. Topics include using common tools and commercial toolsets for extraction and analysis of digital evidence. Network traffic capture and analysis will also be discussed and investigated for the tracing of specific information and source of attacks.

CCD2C05 IT Security Management & Audit

This subject aims to familiarise you with the various IT security policies processes and procedures, as well as best practices in industry and government. You will learn about the associated standards for risk management and the management of IT security. You will also learn how to plan, execute, report and follow up on an information security management system audit.

CCD2C06 Servers Administration & Security

This subject covers the concept and techniques required to configure and administer a typical networked server using common operating systems in the industry. Topics include installation of a server system, configuration of devices, disks and file systems with security configuration of Local Area Network (LAN) and Wide Area Network (WAN) environments. Administering of key server services, using various tools and system scripting to monitor and analyse its performance and security will be discussed and applied. The subject also covers the concepts of encryption methodology, Public Key Infrastructure, key distribution and authentication.

CCD2C08 Secure Web Applications

This subject focuses on secure web application design and development. It discusses the inherent threats and vulnerabilities of web applications and the corresponding countermeasures. In addition, it includes industry best practices such as OWASP (Open Web Application Security Project) Top Ten Web Application Vulnerabilities.

CCD2C09 Enterprise System Security & Assurance

The subject covers the security risks associated with the deployment and use of enterprise level server operating systems as well as services such as email, database, secure wired and wireless access and web. The subject teaches assessment of security risks when these systems are integrated and conducting penetration testing and incident response to ensure the integrity and security of the enterprise systems.

CCD3C01 Security Technology & Innovation

This subject covers topics such as security trends and technologies in the industry, the types of innovation, key elements of innovation and innovation skills required to move progressively from idea to impact. It discusses topics on security innovation relating to the methods, ideas, production, market needs, effective processes, impact and needs of customers.

CCS1001 Effective Interpersonal Communication

This subject introduces you to the principles of effective interpersonal communication. You will learn to consider the message, audience, purpose and strategy in all communicative acts. You will also learn the appropriate conventions to observe in social interaction and how to engage in and sustain conversations.

CCS1002 Communication in the Workplace

This subject aims to equip you with the knowledge and skills to obtain employment and to develop confidence in handling both interpersonal skills and business correspondence in the workplace. You will learn job hunt skills. You will also discover ways to communicate effectively and tactfully in the workplace. You will learn to show sensitivity to your audience by using the concepts of message, audience, purpose and strategy.

CCS1004 The Essentials of Persuasive Presentations

This subject deals with the general principles of persuasion. You will be taught persuasive strategies to write a proposal and convince an audience about an idea, product or service. You will also be taught to consider the message, audience, purpose and strategy in written and oral presentations.

CCS1005 Career Communications

Students will learn to do research on job roles and companies, prepare cover letters and resumes and learn how to prepare themselves for interviews.

CDF2C01 Digital File Systems

The subject covers the characteristics of various file systems found in the respective operating systems; applying methodology for digital file system forensic investigations as well as techniques of data recovery; and finally to be able to identify issues relating to real world forensic investigations. It also introduces the principles of the most common media types and file systems found in operating systems and other digital media types.

CDF2C02 Digital Media Forensics

This subject covers three main areas: Mobile Device Forensics, Image & Video Forensics, and Correlation & Artificial Intelligence. You will be using different tools to extract and analyse digital media data from various mobile devices. Fundamental elements of digital photos and digital videos will also be taught. Different image and video enhancement techniques to process evidence for investigation will be covered. Matching and correlation techniques, including the use of artificial intelligence, will be covered as well.

CDF2C03 Network Security & Forensics

This subject covers the traffic analysis of data sources from various network equipment and systems, such as Web proxies, firewalls, intrusion detection systems, routers and switches, which may contain evidence that can be used to solve a security incident. The topics included are the design and implementation of a secured enterprise network, as well as the analysis of network traffic and logs collected from different data sources in a network to understand attacks and trace suspect activities.

CDF2C04 Investigation Methodology & Techniques

This subject introduces you to the methodology and techniques of analysing multiple sources of digital evidence to determine the cause and effect of an incident. The topics in the subject include the application of best practices and techniques to relate digital evidence to cybercrimes. You will review various case facts to determine how they are related to a crime, reconstruct an incident as well as produce and present findings in a manner that is acceptable to a court of law. You will also go through case examples on best practices and how cause and effect were derived during an investigation.

CDF2C05 Application Forensics

This subject covers the investigation of applications such as web browsers, word processors and standalone executables, as well as Internet applications such as emails and social networking websites, in the context of digital forensics. These applications may be used for illegitimate means or to introduce malicious software into a computer system. In these cases, digital forensic analysis would be carried out to determine the source and extent of the damage.

CDF3C01 Incident Response & Management

This subject covers the policies, plans and procedures for computer security incident response of events such as denial of service, malicious code and authorisation access. It establishes proper processes for assessing the impact of incident on business and implements effective methods of collection, analysis and reporting of data.

CFI1C11 Business Process Management

This subject covers business processes, process modelling and analysis techniques. It will also cover topics on streamlining processes and implementing simple processes automation.

CFI1C12 Banking & Financial Services Technology

The subject introduces students to core financial services, processes and relevant supporting systems and technologies used to meet strategic, operational and regulatory requirements in banks and other financial organisations.

CFI2C09 Lending & Payment Technology

This subject introduces students to the concepts, instruments and technologies used in money market and financial systems. It will also cover the processing of deals, trades and what are the systems used to facilitate these processes.

CFI2C10 Financial Instruments Technology & Operations

This subject introduces students to the different types of securities and investments vehicles available in the financial system. It will also cover the main roles and responsibilities of an analyst or system specialist within the Technology and Operations department of a bank or financial institution.

CFI3C03 Entrepreneurship in FinTech

This subject introduces students to key entrepreneurial skills and concepts, to be applied within the financial technologies domain.

CFI3C04 Wealth & Portfolio Management

This subject introduces the financial planning concepts and techniques used in designing a portfolio for high net worth clients and organisations. This subject will also cover various models of portfolio management. Topics covered include overview of the wealth management advisory process, investment and portfolio management, client relationship management, investment fund products and industry-company analysis using current tools and techniques.

CGE1C06 Game Design

The subject emphasises the use of game design to improve ideas before and during implementation. It covers various aspects of game design, from initial target audience, player behaviour and attitude to aspects affecting implementation within the actual video game. By examining various successful video games within different genres, you will learn to include a variety of attributes in your video games such as motivation for the player and being able to generate re-playability.

CGE1C10 Game UiUx

This subject focuses on user interfaces and the user experiences of interaction within the game. You will learn the basics of how to create effective game interfaces using the appropriate tools and techniques, as well as understand the user perspectives and experiences of users interacting with game interfaces.

CGE1C11 User Experience & Interface Design

This subject introduces students to the concept of Human-Centered Design, and its practice to create useful digital product and interfaces that offer great user experience (Ux). Grounded on the lean product development cycle, the topics covered in this subject include Designing Interfaces, Need Findings, Sketching and Prototyping for Interactive Experience, and Testing.

CGE2C07 3D Game Texturing, Lighting & Animation

This subject equips you with the fundamental knowledge in animation, lighting and texturing for game development. You will be able to produce key frame based biped animation and Tangent Space Normal map for real-time shader. It covers advanced texturing techniques such as Tangent Space Normal Mapping and real-time shader set-up via the 3D authoring tool's interactive development environment (IDE) interface. You will also be introduced to real-time 3D lighting parameters and biped animation.

CGE2C11 Object-Oriented Analysis & Design

This subject introduces object-oriented analysis and design (OOAD) techniques using a suitable tool. The topics covered include use case model, use case specifications, domain model, sequence diagrams, view of participating classes (VOPC), database design and mapping class diagram to code.

CGE2C12 Game Modelling

This subject will introduce you to the 3D model creation workflow specifically for the game production pipeline used within the context of game development. You will learn to use Polygon Mesh construction methods and texturing concepts for 3D game production. This subject also introduces Digital Content Creation (DCC) tools that you will apply to 3D modelling techniques such as low-poly meshing and digital texturing practices such as using coordinate mapping function, and photographic texture creation for crafting 3D in-game art assets.

CGE2C15 Game Math & Physics

This subject will teach you the mathematics and physics concepts, principles and formulas that are crucial to developing games that look realistic, and how to apply these concepts into game situations such as simulating rigid-body collisions using momentum and energy. The subject includes geometry, trigonometry, vectors and matrices, and physics concepts, such as Newton's Laws of Motion and Forces and Energy, which will enable you to simulate realistic motion in games.

CGE2C16 Game Development

This subject provides you with the knowledge and skills to develop graphical interactive games through the use of existing game libraries and to create the component parts of a game, both assets and programming code, and then bring them together to produce a complete game. The subject covers game development techniques such as sprite creation, rendering and animation; collision detection; the main game loop; event handling and control of the frame rate. The in-game usage of sound effects will also be taught, as well as key programming concepts required in game development such as memory management, programming standards and debugging.

CGE2C17 Game Development Project

This subject introduces you to the key processes in the pre-game production, game production and post-game production stages. Topics on game industry roles and responsibilities, game development methodology, programming, design techniques and game-testing and quality assurance will also be covered.

CGE2C18 Game AI

The subject introduces the concept of AI within a game engine. You will learn the basic theories behind AI and explore techniques to apply AI using a game engine for various game types.

CGE2E02 Graphics Programming

This subject introduces you to the theory and technical skills required to program computer graphics for games. You will be able to make use of the programmable graphics pipeline to program basic 2D and 3D computer graphics. It also covers basic computer graphics concepts in the context of the programmable graphics pipeline such as colour, lighting, polygons and textures, as well as more advanced ones such as fog, alpha blending and computer graphics optimisation.

CGE2E05 Programming for Procedural Game Content

This subject focuses on programming specifically for procedurally generated content within a game. You will explore the techniques and approaches using a game engine to build procedural generated content for optimised performance.

CGE2P21 Advanced Game Modelling

This subject teaches you key techniques used in today's game industry for game character creation. You will learn to produce Object Space Normal Map and 3D game characters with complete texture maps and optimisation. This subject also covers the game character production workflow such as character-based modelling method, UV mapping, character mesh detailing and texture painting with digital sculpting tool, and techniques such as texture map baking approach and game model optimisation technique such as Level of Detail (LOD).

CGE2P22 Advanced Game Design

The subject emphasises the use of advanced game and level design concepts to improve ideas before and during implementation. You will be analysing specific areas of games, their appearance historically and their impact to the player. Arranging and producing a level will give you hands-on experience with factors like spawn point placement and level objectives construction.

CGE3C02 Mobile Game Programming

This subject equips you with programming skills and knowledge to develop mobile games for common mobile devices currently available in the market, to optimise code to suit mobile application life-cycles, to test application on emulators and devices, and to build a simple framework for games. It also introduces Software Development Kits (SDK) of mobile platforms, and how to use them to write games to run on embedded devices. You will learn about the mobile market landscape and the tools and platforms used for mobile games.

CGE3C06 Game Production & Publishing

This subject covers aspects of marketing and business planning specific to games and areas such as quality assurance and testing to ready the products for publishing onto various platforms for games. You will also cover the roles of development personnel in the production pipeline, testing techniques, intellectual property rights, game business models, and technological choices in developing and publishing games.

CGE3P21 Game Engine Scripting

This subject equips you with skills and knowledge to develop individual scripts within game engines and to understand, analyse and assemble the game engine elements within a game. It covers the use of game engines within games, from how the user may interface with the engine to how the engine interfaces with the other areas in the game. The subject uses standardised general-purpose modelling languages for conception of ideas and you will implement code within specific areas, such as emitting particles and activating cut scenes, within the context of the game engine.

CIA1C06 Database Application Development

This subject will introduce the fundamental concepts of relational database systems, the design methods specific to relational database, database manipulation using a database query language, and the techniques of implementing relational databases. It will also cover implementation of simple application to access relational database.

CIA1C07 Logic & Mathematics

This subject equips you with the ability to use mathematics and mathematical processes as tools for developing algorithms in computing and other real-life applications. Students will also be equipped with the knowledge and skills to do reasoning, proof and induction. The subject covers logic, functions, sequences, mathematical induction and recursion. Students will also learn the fundamental concepts of mathematics needed for the other core computing subjects.

CIA1C08 Statistics & Analytics

This subject aims to equip you with the knowledge and skills to formulate, analyse and interpret data. Students will be able to apply statistical knowledge and methods of data analysis that are useful in business environments. Students will be taught to use a statistical software to analyse data. This subject covers descriptive statistics, probability theory, normal distribution, estimation, hypothesis testing and linear regression.

CIA2C12 Quantitative Analysis

This subject equips you with knowledge and skills to analyse statistical problems. You will be able to make comparisons between two or more populations of data to determine the relationship between them. Topics covered includes linear regression, correlation between a dependent variable and independent variable, analysis of variance, chi-squared tests, non-parametric statistics, two-way Analysis of Variance (ANOVA) and multivariate analysis. It also includes their applications in economics, social science and other domains.

CIA2C13 Data Visualisation

This subject equips you with knowledge and skills to process data, techniques of analysing data and presenting analysed data using analytics software applications. The subject covers graphing fundamentals, graphing properties and building dashboard for reporting purposes using relevant statistical modelling and analysis techniques. You will also learn how to prepare and present reports on data analysis to support managerial decision-making.

CIA2C01 Data Warehousing Modelling

This subject equips you with the knowledge and skills on data modelling techniques for data warehousing. On completion of this subject, you would be able to design and implement a data warehouse model. The subject introduces the fundamental concepts of data warehouse modelling and covers concepts and principles of data warehouse, introduction to data warehouse model design, data warehouse model implementation and data warehouse applications and tools.

CIA2C05 Data Mining Concepts & Techniques

This subject aims to equip students with the knowledge and skills to use data mining tools to analyse and segment data to explore and discover previously unknown patterns and relationships to generate useful information. This subject covers concepts, methodology, techniques and application of data mining. Several popular data mining techniques, such as cluster analysis, association analysis and decision tree will also be introduced. Students will use software tools to perform these analyses and make decisions based on the analysis results.

CIA2C06 Business Intelligence Applications

This subject equips you with the knowledge and skills to develop Business Intelligence applications for an organisation so that its business performance is aligned to identified goals. The subject covers the concepts, techniques and emerging technologies of Business Intelligence applications development. You will also learn the ethical and legal issues in developing Business Intelligence applications.

CIA2C08 Systems Analysis & Design

This subject equips you with the theory and practice of systems analysis and design to undertake the analysis of a given problem situation, to produce a definition of user requirements and to design an appropriate information system. The subject covers the concepts of system requirements analysis of a defined problem, system design using requirement specifications and the post implementation process. You will also learn the transition from business requirement analysis to design in the unified process of systems development, using case modelling and data flow diagrams.

CIA2C10 Customer Relationship Management & Analytics

This subject equips you with knowledge and skills to apply the concepts of Customer Relationship Management (CRM) and CRM systems in businesses, and analyse CRM data to help improve business performance. It covers the concepts of CRM, customer portfolio management, customer data analytics, and customer lifecycle. You will also learn the applications of CRM in marketing, sales force automation and service automation.

CIA2C11 Predictive & Prescriptive Analytics

This subject provides you with the knowledge and skills to create a predictive model based on historical data to predict future trends and behaviours. In addition, you will be taught techniques to propose better decision to take advantage of a future opportunity or mitigate a future risk.

CIA2C14 Data Science Essentials

This subject equips you with knowledge and skills in the emerging field of data science. The data science life-cycle, history and context, as well as its landscape will be covered in this subject.

CIA2E01 Text & Social Media Analytics

This subject equips you with the knowledge and skills to process textual data and social media for analytical insight. It covers topics such as social media analytics concepts and techniques, text analytics process and techniques such as information extraction, text categorisation, cluster analysis and sentiment analysis.

CIA3E01 Applied Data Science in a Business Domain

This subject introduces how data science is used in the various industries (e.g. Financial Services / Retail / Logistics) to develop actionable insights for better decision making to improve businesses. It provides opportunities for students to integrate and apply their skills acquired through the various modules for this end-to-end implementation in specific business domain. Project management and agile methodologies will also be introduced in this subject.

CIG2C01 Big Data Architecture & Systems

This subject equips you with the knowledge and skills to design a big data system in an organisation, as well as to store and apply structured and unstructured data in the context of big data integration. This subject introduces the emerging data architectures driven by “Big Data” adoption and will cover new paradigms of data systems within the realm of “Big Data,” which evolved from social media networks. It will also cover the concepts and techniques that have driven Big Data adoption and a comparison of these with traditional data store architectures such as structured databases and data warehouses. Emerging data architectures such as real-time and complex event processing tools will also be covered.

CIG2C02 Programming for Big Data

This subject equips you with the knowledge and skills to program a data management application to manage big data. It covers commonly used scripting languages (such as Python) and how it can be used for big data collection and processing. The use of data analysis, web scraping and data structures in the context of big data will be covered. Other languages for data integration and processing (such as R) will be covered as well.

CIG2C03 Big Data Acquisition & Quality Management

This subject equips you with the knowledge and skills to acquire very large unstructured data sets from a myriad of data sources and to ensure data quality. It covers the concepts, methods and techniques to Extract, Transform and Load (ETL) Big Data sets. It also covers various data acquisition and query techniques used in practice, such as web crawling, integration to social media platforms, text systems and machine logs. The tools and techniques for the management of data quality will be covered as well.

CIG2C04 Data Marshalling & Transformation

This subject equips you with the knowledge and skills of data mining and to perform data marshalling and transformation. Students will be able to gather and transform data into standardised format for network transmission and storage. This subject also covers the fundamental concepts of data mining, data marshalling and data transformation techniques. Conversion of data objects into data streams and standard industry data formats with the use of techniques and tools will be introduced. Implementation of data marshalling and transformation in big data systems will also be covered.

CIG2C05 Big Data Virtualisation Concepts & Techniques

This subject equips you with the knowledge and skills to design solutions using big data virtualisation techniques and data virtualisation tools. This subject provides the introduction to concepts and techniques of data virtualisation. It will cover approaches to data management that allow retrieval and manipulation of data through a virtualised data abstraction layer. Various techniques to accessing data in-place, as well as data abstraction and transformation techniques will be covered. The differences between data virtualisation and the traditional Extract, Transform and Load (ETL) approach will be also introduced.

CIG2C06 Data Security & Governance

This subject covers data security and governance as a quality control discipline for assessing, managing, using, improving, monitoring, maintaining, and protecting organisational information. You will learn about concepts such as data security and access, data protection, data policies, business process management, and risk management surrounding the handling of data in an organisation.

CIT1C09 Web Programming

This subject introduces the concepts of web programming. Topics covered include the development of form-based web application and data driven application. It also covers creation of web pages, and session and state management.

CIT1C13 Business Information Systems

This subject covers the role of information systems in various business domains, the concepts of information and processes in businesses and e-commerce/ m-commerce technologies.

CIT1C14 Data Structures & Algorithms

This subject introduces students to the fundamentals of recursion and data structures in solving problems using a programming language. Topics covered include stacks, queues, linked lists and trees. Searching techniques and sorting algorithms.

CIT1C15 Computational Thinking

This subject introduces students to the fundamentals of computational thinking and their application in developing programming solutions to problems. Topics covered include programming concepts, simple data structures and programming techniques.

CIT1C16 Coding & Testing

This subject introduces students to coding principles and practices using an object-oriented approach. Topics covered include objects and classes, composition, inheritance, simple data structures, and testing of programs.

CIT1C17 Application Development Project

This subject introduces students to developing an IT application using the latest technologies. Topics covered include application architecture, design, and development as well as testing.

CIT2C14 Enterprise Web Development & Testing

This subject introduces you to the principles of Web 2.0 technologies, web services and testing of enterprise web applications. Topics covered include client-side scripting, Web 2.0 Application Programming Interfaces, web services and web testing techniques. An Integrated Development Environment will be used to design, implement, test and deploy an enterprise web application that incorporates Web 2.0 technologies, web services and databases.

CIT2C15 Software Testing

This subject introduces students to the fundamentals of software testing. Students will develop an understanding of different types of software testing and their application to development projects.

CIT2C16 Secure Coding Practices

This subject introduces students to the fundamentals of secure coding. Students will apply secure coding principles and techniques to develop and secure applications on different platforms.

CIT2C17 Smart Device Programming

This subject introduces the techniques and practices of programming and implementation of applications on multiple devices and platforms.

CIT2P44 Dynamic Web Application Development

This subject covers the concepts of dynamic web-based applications. Topics covered include designing web pages and implementing the business and data layers of a web application. Technological and design issues of web-based application development will also be discussed.

CIT3C14 Software Engineering

The subject covers an overview of the software development lifecycle for software projects. Topics such as the agile development methodology, requirements gathering, software quality assurance and the fundamentals of project planning will also be covered.

CIT3E01 Applied Machine Learning

This subject covers the fundamentals of machine learning principles and practices. Supervised and unsupervised learning, neural networks and deep learning will also be covered.

CIT3P51 Web Analytics

The subject covers topics such as the underlying concepts of web analytics and related issues, trends and best practices. Measurement and analysis of web metrics and application of web analytics to search engine optimisation and marketing will also be discussed.

CMC1C07 Digital Devices & Systems

This subject introduces students to the architecture and organisation of the digital components of a computer or mobile device. Topics covered include basic functions provided in modern operating systems such as concurrency, memory management and file systems.

CMC1C08 Network Technology

This subject aims to equip students with the knowledge and skills to install, operate, and troubleshoot a small to medium-sized enterprise branch network. Topics include network types, routing and switching concepts, the TCP/IP and OSI models, IP Addressing, Virtual Local Area Networks (VLANs), Routing & Switching Concepts, Static & Dynamic Routing.

CMC1C09 Introduction to Smart Technologies

This subject aims to equip students with knowledge and understanding of smart technologies, some typical application scenarios and their impact to society. Topics such as design thinking, innovation, automation and disruptive business models powered by smart technologies will be covered in this subject.

CMC2C16 IoT Application Development

This subject covers the concepts of Distributed System Architecture like Service-Oriented Architecture, Representation State Transfer (REST) and Web Services, identification of technology and design principles for connected devices and prototyping techniques for writing web services.

CMC2C18 IoT Network Technology

This subject covers the knowledge and skills to establish the right networking technology for an IoT application. Students will gain an in depth understanding of the protocols behind the Internet of Things such as the lightweight Message Queuing Telemetry Transport (MQTT) protocol, which consumes little power and is designed to help sensors and other devices to communicate reliably.

CMC2P42 IT Service Desk Management

This subject introduces the concept and framework of IT Service Desk Management, and the ITIL (IT Infrastructure Library) processes and functions used in supporting and operating IT service desks.

CMC2P51 IoT Data Management

This subject equips you with the knowledge and skills to apply techniques and tools to store, manage and analyse the data generated by smart devices in real time efficiently. You will learn cover topics that include the introduction to Internet of Things (IoT) data management, data security and privacy, the data handling process and cloud-based IoT services, as well as the use of data management tools.

CMC2P52 IoT Security & Privacy

This subject covers the security and privacy issues involved in the implementation of IoT applications and services. You will learn topics which cover cryptography, capability, access-control mechanisms, authentication models and privacy support through data abstraction, integration and data synchronisation.

CMC2P53 IoT System Design

This subject covers the design principles for connected devices and design methodology for an IoT system. You will cover topics that include the underlying principles in building interactive systems and using a combination of hardware, embedded software, web services and cloud computing platform that can sense and respond intelligently to inputs from connected devices in the real world.

CMC3C02 Software-Defined Networking

This subject equips you with the knowledge and skills to design, program and configure software-defined network (SDN) controllers, switches and virtualisation overlays. Topics covered include SDN architecture, standards such as the OpenFlow Standard, use of SDN and troubleshooting techniques using SDN.

CMC3C03 Cloud Systems

This subject aims to equip students with the knowledge and skills to design and implement cloud architecture. Topics such as deployment and provisioning, scalability, data management, security and networking of an enterprise cloud systems will be covered in this subject.

CMP3102 Major Project

This subject involves the application of knowledge in a practical learning situation. The subject covers acquiring new knowledge in technology and skills in project management, problem solving and communication.

CMP3103 Major Project

This subject equips you with the skills and knowledge to apply the acquired business intelligence & analytics skills and knowledge from your curriculum to the design and development of a project deliverable. The subject involves the integration of analysis, design, development, implementation, testing, project management, presentation, and interpersonal skills as well as acquiring new skills in a domain-specific area to solving real-life problems.

CMP3202 Major Project

This subject equips you with the skills and knowledge to apply the acquired big data management and governance skills and knowledge from the various subjects in the diploma to the design and development of a project deliverable. This subject involves the integration and application of knowledge and skills developed from the various subjects in the curriculum. It will provide an opportunity to develop a practical understanding of the products, methodologies, processes, systems, project management and presentation skills needed for big data management and governance application projects.

CMP3402 Major Project

This subject involves the integration and application of knowledge to a project in a practical learning situation. The subject will require acquiring some or all of the following: a practical understanding of the network infrastructure design, mobile and wireless system development methodology, application development and testing, ITIL methodologies, Internet of Things application development, as well as project management, problem-solving and communication skills.

CMP3601 Major Project

This subject involves the integration and application of knowledge to a project in a practical learning situation. It will provide an opportunity to develop a practical understanding of threat and vulnerability assessment, development methodology, evaluation processes, project management and presentation skills for security related systems projects.

CMP3702 Major Project

This subject helps you integrate and apply the knowledge and skills acquired from the various subjects in the Game Design & Development curriculum. It helps you develop a practical understanding of game development methodology, programming and design techniques, quality assurance, project management and presentation skills.

CMP3801 Major Project

This subject involves the integration and application of knowledge to a project in a practical learning situation. The subject will provide an opportunity for the development of a practical understanding of the products, methodologies, processes, systems, project management and presentation skills.

CMP3901 Major Project

This subject covers analysing real-world problems from the perspective of a digital forensics investigator. It will also include proposing and implementing a solution which involves the use of problem analysis, design and development, implementation and testing, project management, presentation, and interpersonal skills.

CSI3002 Student Internship Programme

This subject has a structured programme that will help to develop important workplace skills for application in a real work environment. The subject will cover a pre-internship training programme and a mentorship programme with the industry. The subject will also cover the roles and functions of an IT professional in an industry and ability to contribute effectively with a high level of professionalism in the workplace.

GEN1016 Introduction to Psychology of Deviant Behaviour

This subject introduces you to the theoretical and psychological perspectives of human behaviour. It will examine the psychological factors that relate to deviance and crime on a general level with specific focus on offences conducted with the assistance and use of digital and computer technology. Through this subject, you will be able to appreciate the contribution of psychology and apply it to an investigative process model.

LEA1001/1002/1003 Leadership: Essential Attributes & Practice (LEAP)

This programme comprises three core subjects – LEAP 1, 2 and 3. It seeks to cultivate in you the dispositions (i.e. attitude, skills and knowledge) towards the development of your leadership competencies. It is a character based leadership programme that enables you to develop leadership life-skills that embrace character as the core foundation for your leadership credibility and influence.
